In addition, it was verified in agar plate tests, in how far certain stressors may influence mycotoxin production and growth of *Trichothecium roseum* selected as model fungus. The following questions were answered in the present study: 1. What are the mycological and morphological characters of the pathogens of the sooty blotch disease In the present study the in vitro characters of sooty blotch isolates from Germany were examined in detail. In addition to the use of classical-mycological methods a statistical analysis of the in vitro characters of the respective taxa was carried out. On the basis of these analyses it was differentiated between 11 taxa. Some of them could be definitely identified: *Peltaster fructicola*, *Phialophora sessilis*, *Tripospermum camelopardus* and *Tripospermum myrti*. Some taxa...
