Henceforth prussic acid must be called hydro-cyanic acid its saline compounds, hydro-cyanates; and the compounds of its radicle, cyanurets. We wish it were in our power to give an account of the numerous and delicate experiments by which Gay-Lussac has reduced under the one or the other of these classes the different products of the action of prussic acid upon bodies, and the properties which he has recognised in them. Let it suffice to say that Prussian blue rather appears to him a cyanuret of iron containing water than a hydro-cyanate, or to use the old name, a prussiate. Cyanogen itself possesses peculiar properties. It is a permanently elastic fluid, of the specific gravity 1.8064, having a peculiar and strong odour, giving a sharp taste to water, and burning with a purple flame. Water absorbs four...
